

Allivictus Tincture (Food Supplement)

A unique complex of active substances to boost the immune system.

This complex consists of sulphurous compounds with positive effects on the human organism. All the biological components contained in the Allivictus Tincture are absorbed and processed by the organism almost completely.

Besides, Allivictus enables the user to dosage the tincture accurately depending on his/her weight.

Made entirely of Czech raw materials. Herbal extract without any chemical ingredients. A hand-processed product without the use of any metal tools.

Ingredients: Allium sativum 60%, alcohol 40%

In view of individual tolerance to garlic and in view of high concentration of Allivictus, it is recommendable to start taking it in small doses according to the instructions stated below in order to limit undesirable adverse responses if any. Should they appear, wait until they subside and then continue increasing the daily doses gradually. Responses to individual components of Allivictus may differ case to case.

Directions for use:

1st day	3 drops	☞☞☞
2nd day	6 drops	☞☞☞☞☞☞
3rd day	9 drops	☞☞☞☞☞☞☞☞☞

Then continue until the maximum recommended daily dose (1 drop per 1 kg of the user's weight) is reached. The recommended daily dose should not be exceeded!

Oral administration of Allivictus has showed to be the most effective way of its application. It is advisable to put drops of the tincture on the enclosed plastic spoon and to leave the dose in the mouth for a while before it is swallowed. Do not use metal spoons. As Allivictus is absorbed by the organism quickly and completely, no garlic smell appears (not even from his sweat) which means that the user is not socially confined in any way.

It is generally recommended to increase the above daily doses until the maximum dose (1 drop per 1 kilogram of the user's weight) is reached. It is also recommended to divide the maximum daily dose into three individual doses (in the morning, at noon, in the evening). This dose should be taken for approx. 2 or 3 months and then decreased to roughly a third of the maximum daily dose.

For easier dosage, use the original dosing applicator. For quicker dosage (after the maximum daily dose is reached) use the flow-through piece with a cap (included). For further details see the enclosed instructions.

The Allivictus tincture can be taken for an unlimited period of time. It should preferably be taken on an empty stomach or before a meal. It is recommended to keep drinking regime. Shake the bottle before use!

The product is not intended to replace varied diet.
It is not intended for children under 3. Store out of the reach of children.
Approved by the Department of Health of the Czech Republic, Slovak Republic and Germany.
Store in a cool and dark place.
Best before the date stated on the packing.
